SANDEE SRISAWAT

Game Programmer

Portfolio | GitHub
itch.io | LinkedIn

EDUCATION

Futuregames Warsaw | 2025-present
Game Programmer Course
Mahidol University International College | 2021-2024
Major: Media Communication

WORK EXPERIENCE

Freelance Game Developer - SeaShelt
June-July 2026 | Unity | Mobile event game
- Designed levels and implemented gameplay systems for a mobile game commissioned for an event.
- Built a component-based architecture with a state-machine-driven GameManager.
- Implemented health, armor, obstacles, sun damage, and shade that protects the player from sun damage.

SELECTED PROJECTS

Pathfinding Prototype - Dijkstra's Algorithm | 2026
Unity | C#
- Implemented shortest-path search across a weighted grid.
- Visualized visited nodes and the resulting path to inspect algorithm behavior.

Lab-Run | 2026
Focus: Mobile gameplay systems, component-based game architecture
- Implemented player movement, jumping, and ground checks.
- Connected animation control and player input using Unity's Input System.
- Integrated modular player systems with the GameManager and state machines.

Waste-Mancer | 2025
Technologies: Unity, ScriptableObjects, event-driven architecture
- Developed modular user-interface systems.
- Implemented a spellcasting system where players queue directional inputs to form and cast spells, using ScriptableObjects and events.
- Collaborated within a 12-person development team.

Keep It Burning | 2024
Technologies: Python, Pygame | Solo project
- Built gameplay systems from scratch, including player movement, camera behavior, and collision.
- Implemented animation logic, UI, and map loading.
- Maintained a structured game architecture and debugged gameplay systems during independent development.

TECHNICAL SKILLS

Programming languages: C#, Python, C, Java, JavaScript
Engines & libraries: Unreal Engine, Unity, Pygame, FMOD
Gameplay systems: 3C (character, camera, controls), inventory systems, timed in-game events, AI pathfinding, state machines, UI implementation
Architecture: Object-oriented programming, component-based architecture, design patterns, ScriptableObjects, event-driven systems
Development practices: Git/version control, debugging, collaborative game development
